Stuart's Strategy

Introduction
As of July 2025*

*Reviewed by Strategy team every 6 months

stuart.

The purpose of this presentation

1 Why we're sharing this now:

- We have shifted our strategy in 2024, and it's important that everyone understands where Stuart is heading.
- We want to align all teams around a common direction, so we can make faster, smarter decisions at every level.
- This strategy reflects input from across the business, and it's a shared roadmap, not just leadership's plan.

2 What this deck will cover:

- Our vision for the next 12–24 months
- The strategic priorities we'll focus on
- How success will be measured

3 What we want you to take away:

- Clarity on where we're going
- Confidence in our direction
- Inspiration to contribute

Our vision and ambition.

Our vision is to be the own channel, same-day delivery leader in food, grocery and retail.

Our ambition is to capture 10% of by market by 2027.

Our mission.

Logistics for a sustainable world: shared, efficient, and reliable.

Note: The new vision was communicated in early 2024.
The Mission stayed unchanged, a testament to its relevance over time..

Why did Stuart decide to focus on “same day delivery” at large?

stuart.

The market growth in Europe has been depressed since 2022 with further external pressures in the last-mile delivery space.

Macroeconomic

Post Covid recovery has been slower than expected. Many business had to shift the gear from growth to profitability.

With significant political shifts at macroeconomic level, the projection of growth in Europe continues to be below 2%.
See next slide

Industry events

The quick delivery food marketplaces (UberEats, Deliveroo, JET) entered a world of deep consolidation with increased pressure for smaller players like stuart.

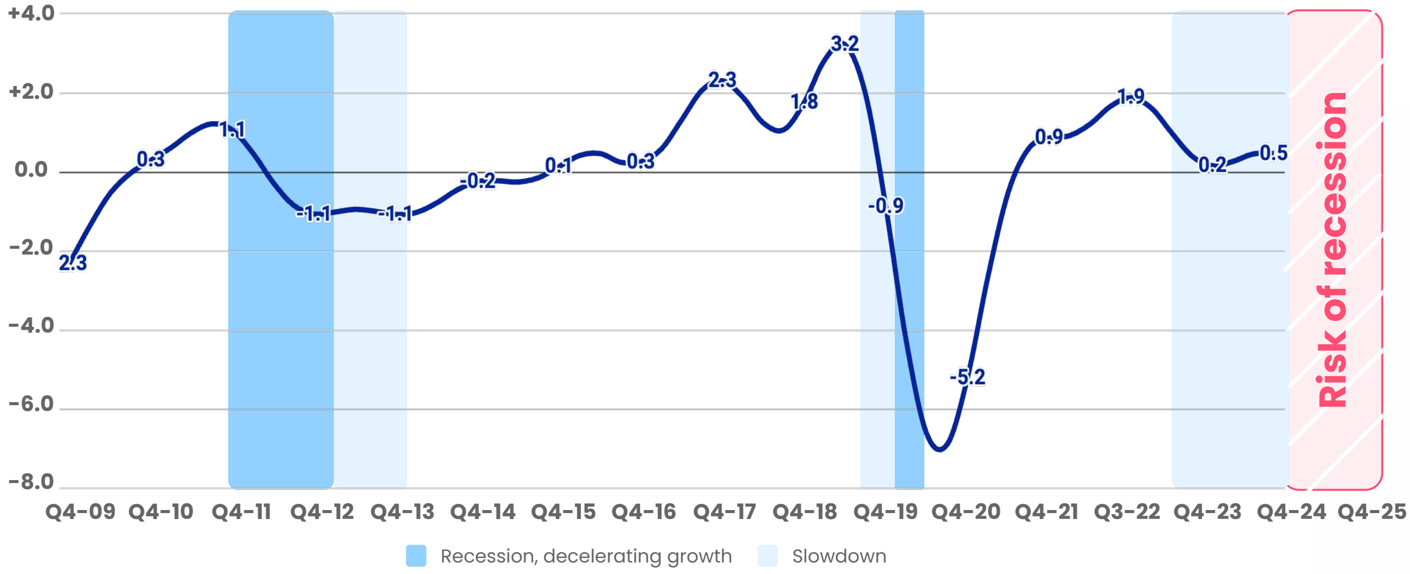
As food marketplaces have higher capital and both demand and supply liquidity, it's harder to win head to head with only the instant proposition.

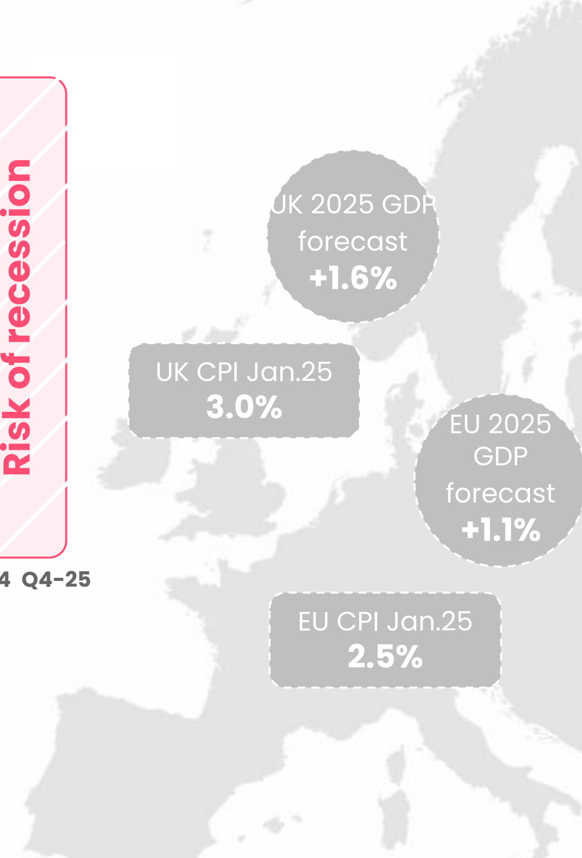
Internal

Stuart was acquired in November 2023 by Mutares, a private equity, with the mandate to lead the company to profitability. This is a significant change from Stuart's 8 years of existence where growth at any cost was the dominating mindset. The company losses reached 40m in 2022.

Macroeconomic observation | Degradation of economic situation in 2025 continues to pose a risk to the wider market

GDP growth cycle as a percentage of deviation from the trend





Economic situation impacts

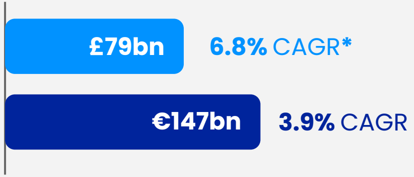
Household consumption declines to boost savings in both EU and the UK
- Consumer spending in Q4-24 increased by only 0.1% in EU vs. 0.0% in the UK, at the same time the savings rate reached 10% vs. 8.9% in Q2-24.

Foreign direct investment slow down in both EU and the UK
- FDI experienced respectively -4% and -6% for EU and the UK in 2024

Source: Eurostat, Bank of England and EU commission

Market size | Market growth in our industry is driven mainly by price inflation - so we expect Stuart's gains to be limited

Food service



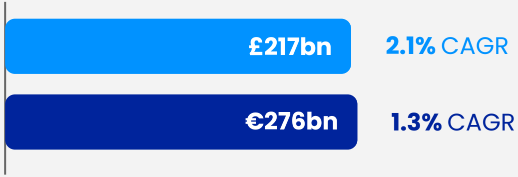
United-Kingdom

Market growth levers: Customers ordering mainly value-driven offering, focusing on cost effectiveness.

France

Market growth levers: Strong dining in culture combined with France been the most visited country in the world.

Grocery



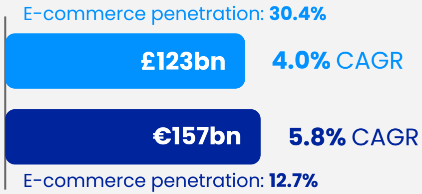
United-Kingdom

Market growth levers: Discounters expansion is leading the grocery market, as they are pushing their E-commerce.

France

Market growth levers: E-commerce expansion combined with consumer shift towards value.

Retail E-commerce



United Kingdom + France

Market growth levers for both: Social media influence, creating their own marketplaces, such as Temu and TikTok. Clothing and footwear dominate the retail market, fueled by the rise of cheap fast fashion (e.g., Shein). While in-store retail shopping is slowly growing. This could be an opportunity for Stuart to focus on specific sectors, such as hardware, CBD, and DIY.

● **United-Kingdom**
● **France**

**Note: CAGR from 2024 to 2028*

Market size on deliveries volumes | The markets for urgent food and grocery deliveries are and will remain dominated by marketplaces

	2025 data # orders/CAGR 24 - 28	Marketplace vs. Own channel volume/share	Stuart's 2025 YTD + Run rate
Instant Food	**667m** **+2.4%**	MKP: **576m** 86% / OC: **91m** 14%	**0.3m** ~0% of own channel
Grocery Instant + SFS	**108m** **+3.7%**	MKP: **75m** 70% / OC: **33m** 30%	**5.7m** 17% of own channel
Instant Food	**143m** **+3.5%**	MKP: **133m** 93% / OC: **11m** 7%	**0.6m** 5% of own channel
Grocery Instant + SFS	**25m** **+2.1%**	MKP: **15m** 58% / OC: **10m** 42%	**0.5m** 5% of own channel
Instant Food	**49m** **+4.3%**	MKP: **39m** 79% / OC: **10m** 21%	**1.0m** 10% of own channel
Grocery Instant + SFS	**7m** **+12.5%**	MKP: **6m** 77% / OC: **1m** 23%	**~0.0m** ~0% of own channel

Stuart's situation in a nutshell

In 2025 Food OC volume in France represent 5% of the market (vs.12% in 2024), we face fierce competition, primarily beating us on price and coverage. Our strong presence in Grocery Instant and SFS in the UK is confirmed, with 17% OC market share. We strengthen our positions by push on verticals where we have a competitive advantage (Poland Food and UK Grocery).

Note: Data from Stuart market model and Stuart's DWH

Confidential

Stuart's journey in numbers is one of significant re-invention after 2022

Stuart's strategy in a changing landscape

"Strategy is about making choices, trade-offs; it's about deliberately choosing to be different" (Michael Porter)

We focus on strategy that gives us edge and allows us to keep it. We chose to be contrarians, reflected in our positioning.

Stuart's positioning is shifting

	From	To
Offering	Focus on instant small basket delivery	Build capabilities in **large basket scheduled**
Price	Competitive pricing but not the cheapest	**Price leadership:** lowest cost with reliability
Coverage	Pursue national coverage	Hyper focused in **Mega & Large** cities
Courier	Treated as gig suppliers	**Courier partners stay with us** - and show up better

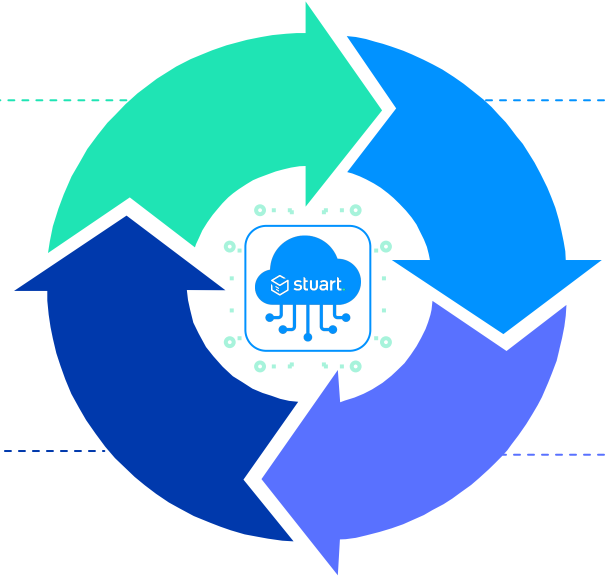
Our Moat

- ✔ Operational complexity is high and we've solved it in our platform. Competitors still focus on speed.
- ✔ We have a structural cost advantage vs traditional next day delivery.
- ✔ We embrace higher demand density in a model struggling to make it work profitably.
- ✔ Low churn = high reliability. We invest to keep courier partners and show in service quality

We are hyper-focused on revenue growth to create network effects

More clients
We need to sign more clients that align with our positionings (i.e., quality focus, less focus on national coverage)

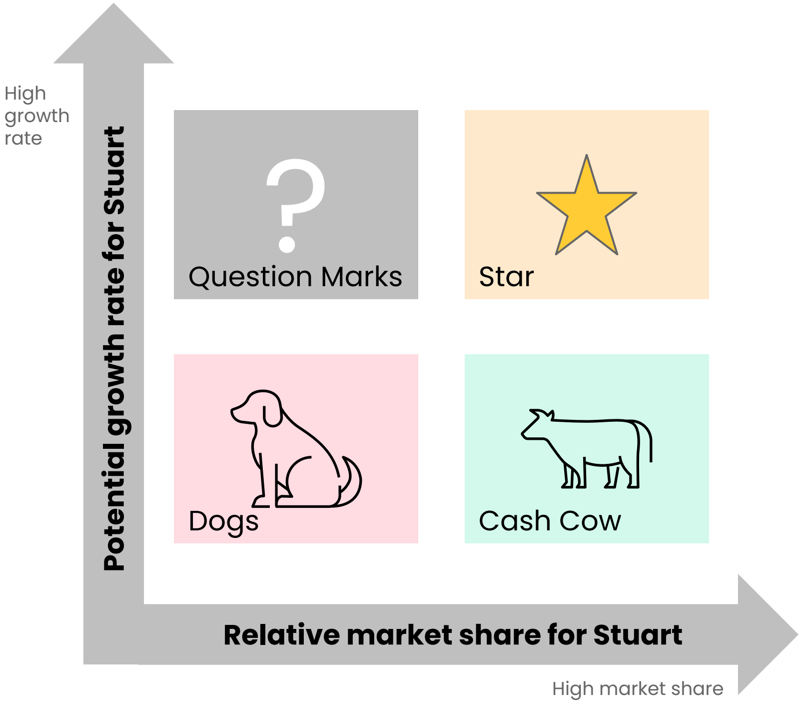
More volume
We need more volume in the right locations and with standardized SLAs/SLOs (i.e., Tier 1&2 cities)

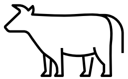


Lower CPO
More couriers in the right areas of demand will reduce our costs and improve our competitiveness

More couriers (supply)
More volume means higher total earnings for couriers, increased activation and commitment rates

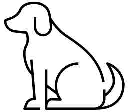
GTM strategy | We leverage a matrix “farmwork” to make the strategic decisions towards our vision





- Currently generating steady cash flow and require minimal investment

→ *Maintain their position and use their profits to fund Stars and Question Marks*



- Generating little profit and may even incur losses, low growth potential for Stuart

→ *Consider divesting or repositioning unless they serve a strategic purpose*

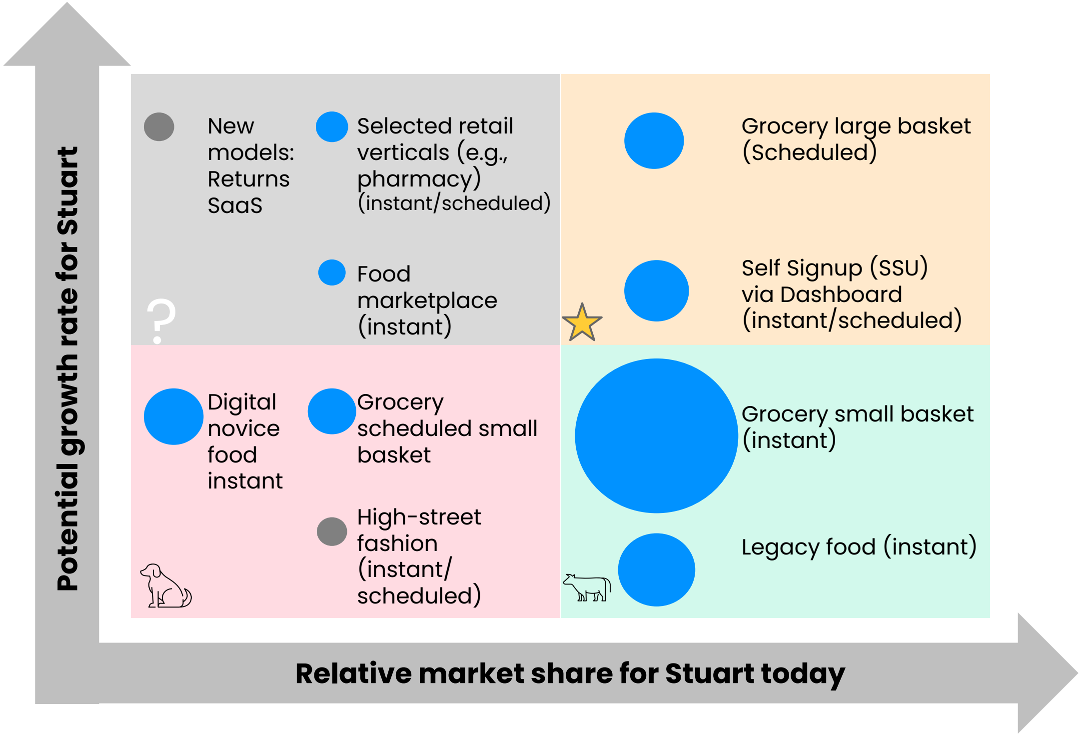
- Have the potential to generate high revenue but require significant investment to maintain our position

→ *Continue investing to sustain growth and eventually turn them into Cash Cows*

- Require significant investment to grow, but their future is uncertain

→ *Decide whether to invest and push them into Stars or divest if they don't show potential*

GTM strategy | Supported by extensive market research we made choices on where to invest more



Continue to **prioritize** grocery small basket (e.g., Tesco Whoosh, Zapp) and legacy food (e.g., Pizza Hut) instant to generate profit

Deprioritize digital novice food and high-street fashion retail brands (i.e., H&M, Zara)

Make bets on grocery large basket scheduled and SSU

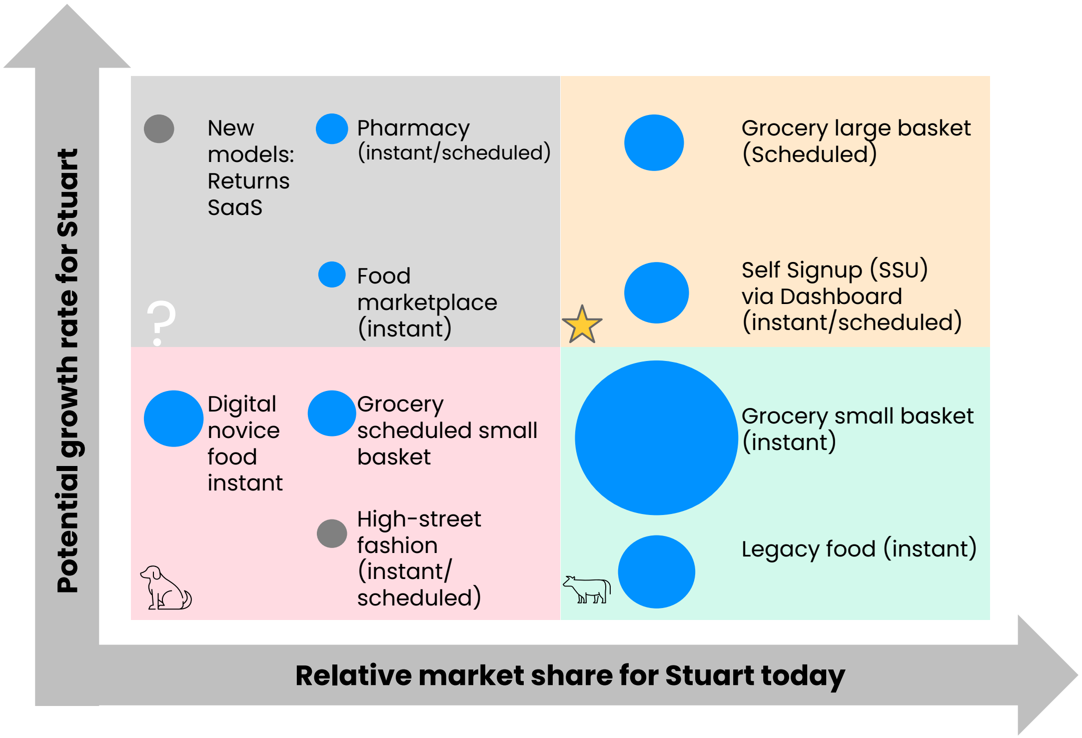
?

Further explore other verticals/delivery products before making a strategic decision

Illustrative relative sizing of the circles based on 2025 Business Plan

Not explicitly included in BP25; sizing of the circle does not carry meanings

GTM strategy | We expect to evaluate the propositions every 6 months to ensure we allocate resources right to the most promising topics



Continue to monitor performance (volume and GM) and decide if stays in the quadrant

Continue to monitor performance (volume and GM) and decide if stays in the quadrant

Double down on the efforts in short term (>6m) with dedicated taskforce to support new delivery products and review within 6-9M if meeting performance requirement* (to be defined)

? Led by Strategy or Commercial to further explore and move to one of the 3 quadrants within 6-9 months based on market feedback

Illustrative relative sizing of the circles based on 2025 Business Plan

Not explicitly included in BP25; sizing of the circle does not carry meanings

We are not only focusing on competitive instant space because…

Overcrowding instant space dominated by marketplaces and their white label units

High importance on coverage where Stuart is at disadvantages

Lower margins driven by fierce price competition

Uber Glovo deliveroo JUST EAT Wolt

We are carving out niche verticals to improve our defensibility

We continue to deliver instant but focus on groceries to support density

We double down the effort on large same-day scheduled

We explore opportunities to work with traditional couriers by enhancing their consumer value propositions (i.e., 7-day, scheduled)

EVRi The new Hermes dpd InPost out of the box

So, what are the cross-functional implications of our choices?

stuart.

GTM | Cross-functional implications **Summary**

	Stop doing	Start doing	Keep doing
	• Stop proactively looking for new opportunities • Stop providing bespoken services/products (i.e., customized integration, tech support, new geography expansion)	• Optimize operation efficiency for current clients (i.e., BPO takeover) • Push back on selected RPFs (i.e., investing resources pending on FTE availability at the given moment). Not all RFPs will be answered	• Continue to serve existing clients as BAU
	• Stop over-performing on SLAs/SLOs without business value • Stop relying on manual or non-standard processes	• Standardize SOPs and automate to reduce workload • Prioritize platform maintenance and require business cases for major tech investments	• Maintain standard AM routines • Stay flexible on pricing and service customization • Monitor client performance and delivery plans closely • Continue client integrations and support new launches with BPO resources
	• Stop accepting average performance for top-tier “Star” clients (i.e, start to outperform)	• Tailor AM routines and involve leadership in strategic engagements • Act fast and customize support (CX, courier prioritization, refund automation) • Use data to predict churn and improve satisfaction • Assign tech budgets with clear outcome goals	• Stay flexible on pricing and service customization • Proactive monitor performance • Continue bespoken client integrations
?	• Stop prioritizing platform maintenance	• Involve leadership in early-stage discovery • Channel more ops time into proving/disproving value (i.e., CX)	• Keep letting Strategy to focus on exploratory/testing phase

GTM | Cross-functional Implications Cash Cow

	Stop doing	Start doing	Keep doing
Revenue		- High priority on Sales and RevOps team efforts - Focus on volume protection - Collect client feedback, respond and take corrective actions - LT and ExCo involvement on strategic roadmap discussions or discovery routines (client/prospect meetings, MBR/QBR, strategic partnerships)	- Standard AM routines based on client Tier and “white glove” approach - Pricing flexibility and service customisation - Be on the constant look for growth opportunities (pricing, volume growth, ancillaries, etc) - Keep monitoring performance at a client level and flagging to relevant stakeholders Ops/Product
Ops	- Stop over performing on SLAs and SLOs - Stop manual processes and non standard approach if not critically needed	- Implement standardized SOPs companywide - Maximize incentives efficiency and manage cost trade offs - Automate to reduce workload - Identify early churn risks & client dissatisfaction by using predictive analytics to identify key performance incidents and support interactions that indicate potential churn risks at POS level (Analytics-led task)	- Keep tracking detailed delivery plans - Keep focus on client SLAs and SLOs - Identify areas for automation, optimization and efficiency improvements. i.e. Automation of refunds, - Allow service customization when necessary and based on client expectations. - Honeymoon: Provide dedicated BPO support for new clients launches and client events
Tech	- Start giving the highest priority on platform maintenance	- Write a business case if investment > 3FTE months for new feature development (requires a autonomously team decision without a formal BC approval) - Start using BC during strategy/roadmap/OKR reviews to justify prioritisation choices	- Continue to do integration for clients

GTM | Cross-functional Implications Dog

	Stop doing	Start doing	Keep doing

Revenue	- Stop actively reach out to get RFPs	- Lowest priority on Sales and RevOps team efforts, reactive and targeted approach only. Focus on quotation asks plus pre-identified situations where our value prop is stronger (i.e. multi-carrier setup vs exclusivity)
		- Standard pricing grid and service levels only. BC needed to approve exceptions
			- Selectively complete RFPs upon invitation
			    - if revenue above certain threshold
			    - if we can provide the client coverage
			- Standard AM routines based on client tier

Ops	- Stop servicing from City Ops if no GM or clear ROI (i.e., investing on FTEs and working hour) - Stop ALL personalized processes for both City ops and CX (phone lines) - Stop proactively monitoring performance - reactively acting only upon client feedback - Stop geo expansion upon client request without a clear BC - Stop expanding fleet mix upon client request	- Maximize automation and standardization - Potentially handover to BPO for city Ops and track CX cost - Improve the granularity of sourcing and onboarding to reduce focus on specific areas and TTs - Push for region focus not client forced expansion to maximize density	- BAU processes for City Ops
Tech	- Stop bespoken integration, new feature development and data optimisation by default	-	- Continue to maintain platforms but below the priority of Cows and Stars

GTM | Cross-functional Implications Star

	Stop doing	Start doing	Keep doing
Revenue		- Highest priority on Sales and RevOps team efforts. Focus on targeted segments / prospect list - Custom AM routines that can be exceptional vs default service levels based on client tier. Possibility to develop new customized features and product without necessarily price increase, objective is to grow the client - LT and ExCo involvement on strategic roadmap discussions or discovery routines (client/prospect meetings, MBR/QBR, strategic partnerships) - Monitor client feedback, respond and take corrective actions in public pages such as TrustPilot (main repository for SSU clients' feedback)	- Pricing flexibility and service customisation allowed - Be on the constant look for growth opportunities (pricing, volume growth, ancillaries, etc) - Keep monitoring performance at a client level and flagging to relevant stakeholders like Ops or Product

Ops	- Stop treating Stars as cash cows
	- Stop accepting average performance on this kind of client
	- Onboarding cars indiscriminately without factoring in fuel source
		- Overperform on expectation to retain the clients
		- Act faster, foresee trends and meet unspoken client needs
		- Implement tailored approaches for CX
		  • Create customized escalation resolution processes
		  • Design client-specific support channels
		  • Ensure high-quality courier performance → Prioritize reliable couriers for these clients + Less automation for couriers assigned to client deliveries
		  • Build processes that solve immediate client problems i.e. automation of refunds + more flexible refund policies
		- Leverage BPO resources to track performance trends and maintain client relationships (upskilling /re-scoping CS+).
		- Implement DiSat feedback loop to identify areas of improvement and enhance CSAT
		- Identify early churn risks & client dissatisfaction by using predictive analytics to identify key performance incidents and support interactions that indicate potential churn risks
			- Tailor fit tools and processes until standardized / automated
			- Research CX market trends and best-in-class practice to Improve invoicing process and automate of refunds

Tech		- Set an overall budget given to the team to reach pre-defined outcomes (e.g., Self Serve revenue target) and no need for	- Continue to integrate with clients

GTM | Cross-functional implications Question Mark

?

	Stop doing	Start doing	Keep doing
Revenue		- Ring-fenced resources from Sales and RevOps teams to do targeted sales sprints and achieve bigger depth on segments' needs (examples: Pharmacy, DIY, Returns, etc.) - Join external events to increase and improve our network	- Continue to investigate and resolve issues that limit our progress in new verticals (i.e., theft for retail) - Standard AM routines based on client tier. Bigger focus on joint strategic roadmap if confirmation of POC is achieved - Pricing flexibility and service customisation
Ops		- Experiment faster - Channel more working hours to prove value or lack of value - Understand the CX models to identify and take opportunities - Time boxed tests with Ops hacky processes	
Tech	- Stop over investment on resources - Stop giving priority on platform maintenance	- Put together a dedicated small team to experiment new features and accept higher failure rates
